FOR IMMEDIATE RELEASE

Valor Systems announces their new cross platform Public Safety Solution

Technological foresight offers great investment protection for agencies

Oak Brook, IL. (September, 2009) - Introducing the Valor Incident Management System™, VALOR IMS™, for Macintosh®. Now more than ever, it is vital to have a cross platform solution offering true investment protection. Valor believes you should be able to take advantage of solid, robust and secure platforms that fit into your organization today and well into the future.

A single network can be configured with a Windows®-based version of VALOR IMS *and* a version of VALOR IMS that runs on Macintosh® - all working seamlessly throughout your department. An agency does not have to choose between one or the other.

This technological marvel has created tremendous interest in the Public Safety market. Many are pleased to see that a CAD/RMS vendor would actually “think outside the window”™, while others want to know how Valor accomplished such an intriguing feat.

William Rendina, President & CEO, said, “We recognize the extensive benefits of a cross platform solution. Our Public Safety CAD and RMS solutions for Macintosh and Windows truly set Valor apart from all the competition. This is one of the boldest, innovative developments our industry has seen in years.”

About Valor Systems

Since 1994, Valor Systems, Inc. has designed, developed and implemented Public Safety software solutions for agencies of all sizes across 12 states. The innovative Valor Incident Management System™, VALOR IMS™, includes ValorCAD™ Computer Aided Dispatch, ValorRMS™ Law Enforcement Records Management and ValorMOBILE™ Mobile Data Systems.
